

ContentKeeper Cache

Web Caching and Accelerator

KEY FEATURES:

Speed Accelerates delivery of rich web content and video

Easy Installation and minimal administrative overhead

Full Integration with Microsoft's Active Directory™ and other popular directory services

Web-Based Administration
Provides an intuitive “drag and drop” web-based graphical interface

Authentication Acts as proxy server to provide centralized authentication

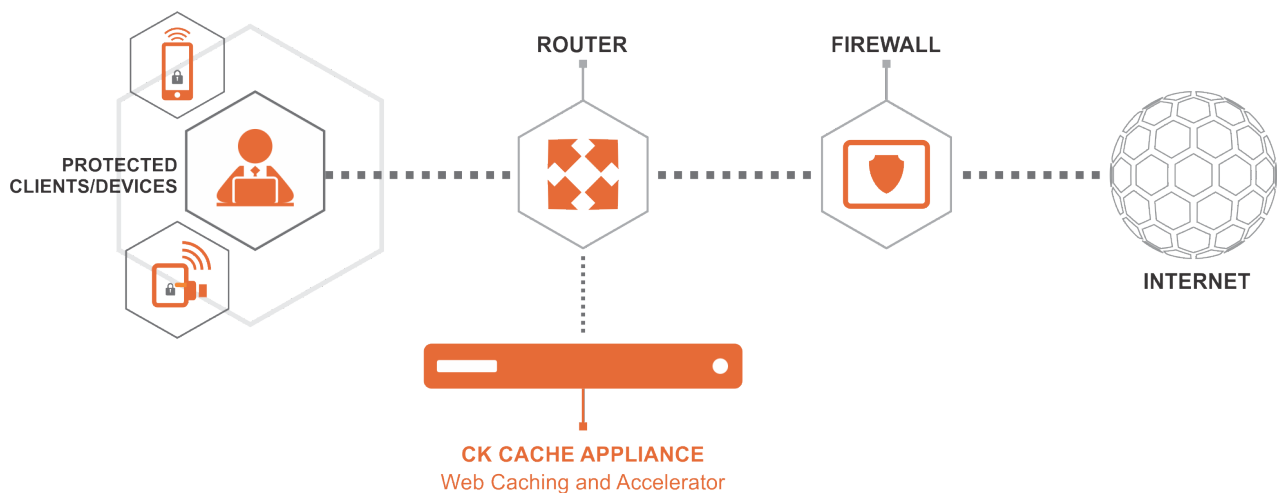

Traffic Management Provides full control over selective forwarding of web traffic

Enterprise-Level Caching

ContentKeeper Cache provides a high speed, easy to use caching and proxy solution to help manage increased network traffic demands. It helps improve efficiency of your existing network infrastructure by reducing server loads and improving delivery speeds and response times for frequently accessed content. Helps reduce long-term infrastructure costs.

ContentKeeper Cache Advantages

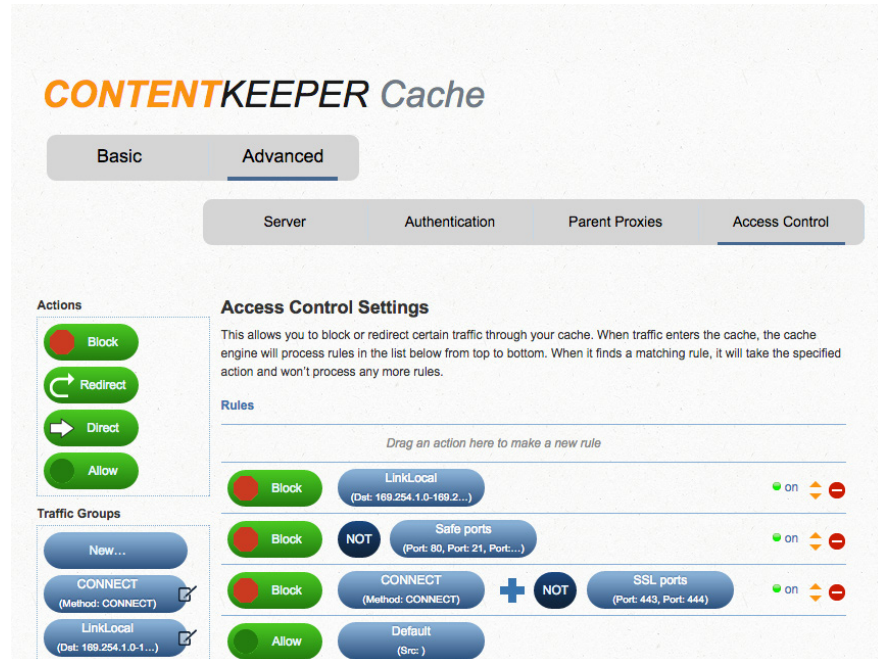

- Saves bandwidth and reduces server load by locally storing frequently accessed data
- Optimizes data flow between users and servers
- Efficiently manages traffic with a simple and intuitive “drag and drop” Access Control List (ACL) fully integrated with Microsoft Active Directory™
- Provides “drag and drop” proxy forwarding
- Reduces costs by decreasing bandwidth usage required to access frequently used Internet resources
- Efficiently helps manage network resources by targeting, consolidating and directing Internet traffic
- Improve delivery speed and response times through optimizing TCP flows
- ContentKeeper TurboCache Appliance (optional) supports high-speed multi-gigabit networking demands in large enterprise environments

About ContentKeeper

ContentKeeper provides innovative and proven Internet security and networking solutions to help organizations proactively address the evolving security and network challenges in today's enterprise environments.

Since 1999, ContentKeeper has been building best-in-class web security, networking and web filtering solutions.

Deployment Options

ContentKeeper Cache provides flexible deployment options based on the size of your organization and network traffic requirements:

CK-Cache: RAM-based or Ram & Disc Array-base caching for small & medium size organizations.

CK-TurboCache Appliance: Provides high performance, high speed caching for large enterprises and the most demanding environments. ContentKeeper's modified TurboCache hardware ensures scalability for larger network deployments and extensive application delivery services.

You can purchase a CK-Cache license and enable it on a Web Filter Pro appliance or with other ContentKeeper applications, depending on the throughput requirements of your organization.
